1. Product introduction

Gr-1016581 - Gr-1023005 - Gr-1029297

Fig. 1 CRE, CRIE and CRNE pumps

The CRE, CRIE and CRNE pumps are based on the CR, CRI and CRN pumps.

CRE, CRIE and CRNE pumps belong to the so-called E-pump family and are referred to as E-pumps.

The difference between the CR and CRE pump ranges is the motor. CRE, CRIE and CRNE pumps are fitted with an E-motor, meaning a motor with a built-in frequency converter.

The E-pump motor is a Grundfos MGE motor designed to meet EN standards.

The built-in frequency converter enables continuous variable control of the motor speed. This means that the pump can be set to operation at any duty point.

The purpose of continuous variable speed control of the motor speed is to adjust the performance to a given requirement.

CRE, CRIE and CRNE pumps are available with an integrated pressure sensor connected to the frequency converter that functions as a feedback sensor for constant pressure control.

The pump materials are identical to those of the CR, CRI and CRN pump ranges.

When to select an E-pump

Select an E-pump if the following is required:

- controlled operation, meaning that the consumption fluctuates
- constant pressure
- communication with the pump.

Adaptation of performance through frequency-controlled speed control offers obvious benefits, such as:

- energy savings
- increased comfort
- control and monitoring of pump performance.

Performance range

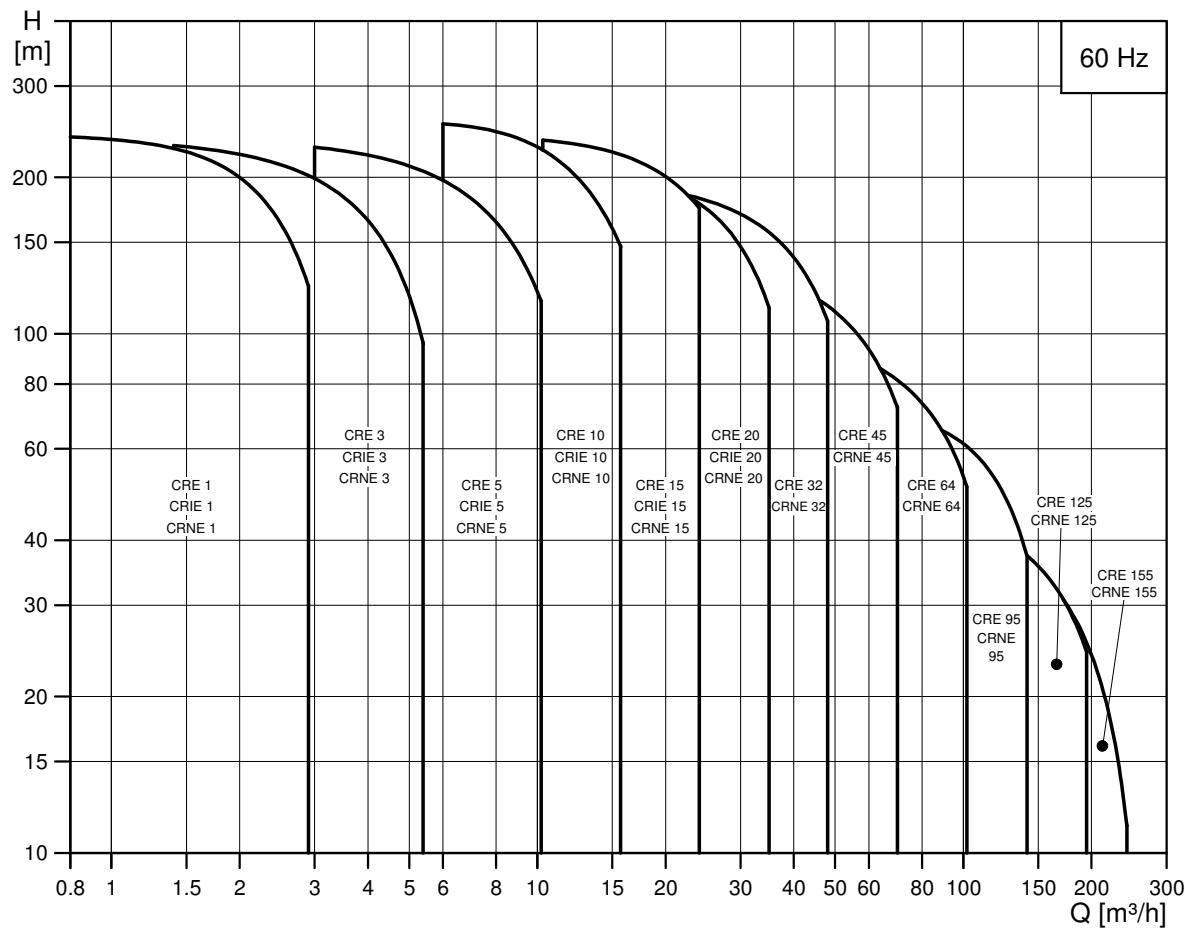

Fig. 2 Performance range, CRE, CRIE and CRNE

EuP ready

The CRE, CRIE, CRNE pumps are energy-optimised and comply with the EuP Directive (Commission Regulation (EC) No 547/2012) which has been effective since 1 January 2013. As from this date, all pumps will be classified/graduated in a new energy minimum efficiency index (MEI).

TM02 7357 1519

Minimum efficiency index

Minimum efficiency index (MEI) means the dimensionless scale unit for hydraulic pump efficiency at best efficiency point (BEP), part load (PL) and overload (OL). The Commission Regulation (EU) sets efficiency requirements to MEI ≥ 0.10 as from 1 January 2013 and MEI ≥ 0.40 as from 1 January 2015. An indicative benchmark for best-performing water pump available on the market as from 1 January 2013 is determined in the Commission Regulation.

- The benchmark for most efficient water pumps is MEI ≥ 0.70 .
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.
- The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable-speed drive that matches the pump duty to the system.
- Information on benchmark efficiency is available at <http://europump.eu/efficiencycharts>.

Minimum efficiency index (MEI)

Pump type	MEI
CR 1-3	≥ 0.70
CR 3-3	≥ 0.70
CR 5-3	0.57
CR 10-3	≥ 0.70
CR 15-3	≥ 0.70
CR 20-3	≥ 0.70
CR 32-3	≥ 0.70
CR 45-3	≥ 0.70
CR 64-3	≥ 0.70
CR 95-3	≥ 0.70

Applications

Application

Water supply

Filtration and transfer at waterworks

Distribution from waterworks

Pressure boosting in mains

Pressure boosting in high-rise buildings, for example hotels

Pressure boosting for industrial water supply

Industry

Pressure boosting

Process water systems

Washing and cleaning systems

Vehicle-washing tunnels

Firefighting systems

Liquid transfer

Cooling and air-conditioning systems (refrigerants)

Boiler feed and condensate systems

Machine tools (cooling lubricants)

Aqua-farming

Special transfer duties

Oils and alcohols

Acids and alkalis

Glycol and coolants

Water treatment

Ultrafiltration systems

Reverse osmosis systems

Softening, ionising, demineralising systems

Distillation systems

Separators

Swimming baths

Irrigation

Field irrigation (flooding)

Sprinkler irrigation

Drip-feed irrigation

For further information about which pump version to choose for a specific application or liquid, see section [9. Pumped liquids](#), page 82.

Pump

The CR and CRE pumps are non-self-priming, vertical multistage centrifugal pumps.

The pumps are available with a Grundfos standard motor (CR pumps) or a Grundfos frequency-controlled motor (CRE pumps).

The pump consists of a pump head and a base.

The chamber stack and the sleeve are secured between the pump head and the base with staybolts. The base has inlet and outlet ports on the same level (in line). All pumps are fitted with a maintenance-free mechanical shaft seal of the cartridge type.

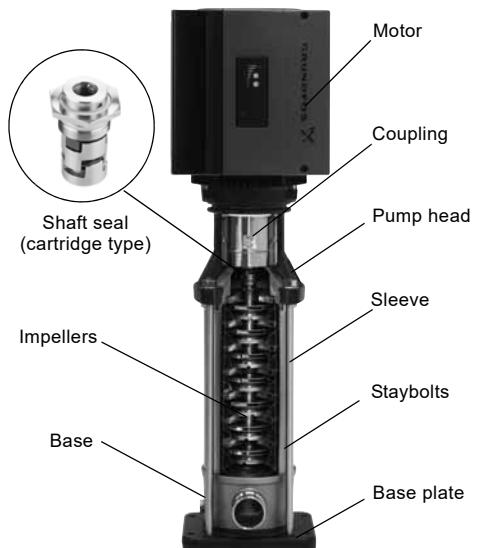

Fig. 3 CR pump

TM05 9471 3913 - TM3395

Motor

MGE motors

MGE motors incorporate thermal protection against slow overload and blocking (IEC 34-11: TP 211).

CRE, CRIE and CRNE pumps require no external motor protection.

Frequency-controlled MGE motors

CRE, CRIE and CRNE pumps are fitted with a totally enclosed, fan-cooled, frequency-controlled MGE motor with principal dimensions to EN standards.

Electrical tolerances comply with EN 60034.

CRE, CRIE, CRNE pumps from 0.37 to 1.1 kW are fitted with single-phase MGE motors as standard. The 1.5 kW single-phase MGE motors are available on request.

CRE, CRIE, CRNE pumps from 1.5 to 22 kW are fitted with three-phase MGE motors as standard. The 0.37 to 1.1 kW three-phase MGE motors are available on request.

See Grundfos Product Center or www.grundfos.com.

	P2: 15-22 kW: 3 x 380-480 V
Supply frequency	50/60 Hz

MGE 0.37 to 11 kW

Advanced functional module (FM 300)

The FM 300 is factory-fitted in all pumps from 0.37 to 11 kW.

The module has a number of inputs and outputs enabling the motor to be used in advanced applications where many inputs and outputs are required.

The FM 300 has these connections:

- three analog inputs
- one analog output
- two dedicated digital inputs
- two configurable digital inputs or open-collector outputs
- Grundfos Digital Sensor input and output
- two Pt100/1000 inputs
- two LiqTec sensor inputs
- two signal relay outputs
- GENibus connection.

Connection terminals

All inputs and outputs are internally separated from the mains-conducting parts by reinforced insulation and galvanically separated from other circuits. All control terminals are supplied with protective extra-low voltage (PELV), thus ensuring protection against electric shock.

• Signal relay outputs

- Signal relay 1:

LIVE:

Mains supply voltages up to 250 VAC can be connected to this output.

PELV:

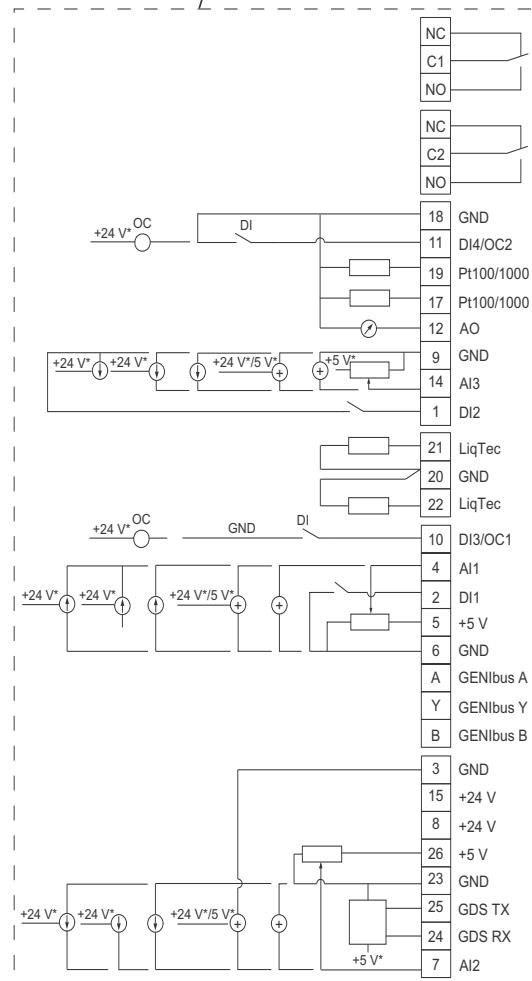

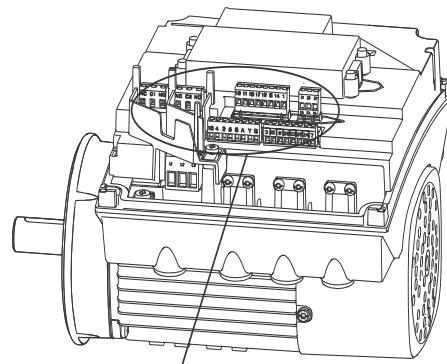

The output is galvanically separated from other circuits. Therefore, the supply voltage or protective extra-low voltage can be connected to the output as desired.

- Signal relay 2:

PELV:

The output is galvanically separated from other circuits. Therefore, the supply voltage or protective extra-low voltage can be connected to the output as desired.

• Mains supply (terminals N, PE, L or L1, L2, L3, PE)

* If an external supply source is used, there must be a connection to GND.

TM05 3509 3512

Fig. 4 Connection terminals, FM 300 functional module

MGE 15 to 22 kW

Advanced I/O module

The advanced I/O module is the standard functional module in all MGE motors from 15 to 22 kW.

The module has a number of inputs and outputs enabling the motor to be used in advanced applications where many inputs and outputs are required.

The Advanced I/O module has these connections:

- start/stop terminals
- three digital inputs
- one setpoint input
- one sensor input (feedback sensor)
- one sensor 2 input
- one analog output
- two Pt100 inputs
- two signal relay outputs
- GENibus connection.

Connection terminals

As a precaution, the wires to be connected to the following connection groups must be separated from each other by reinforced insulation in their entire lengths.

Inputs

- Start/stop (terminals 2 and 3)
- digital inputs (terminals 1 and 9, 10 and 9, 11 and 9)
- sensor input 2 (terminals 14 and 15)
- Pt100 sensor inputs (terminals 17, 18, 19 and 20)
- setpoint input (terminals 4, 5 and 6)
- sensor input (terminals 7 and 8)
- GENibus (terminals B, Y and A).

All inputs are internally separated from the mains-conducting parts by reinforced insulation and galvanically separated from other circuits.

All control terminals are supplied with protective extra-low voltage (PELV), thus ensuring protection against electric shock.

Output (relay signal, terminals NC, C, NO)

The output is galvanically separated from other circuits.

Therefore, the supply voltage or protective extra-low voltage can be connected to the output as desired.

- analog output (terminal 12 and 13).

Mains supply (terminals L1, L2, L3)

A galvanic separation must fulfil the requirements for reinforced insulation including creepage distances and clearances specified in EN 61800-5-1.

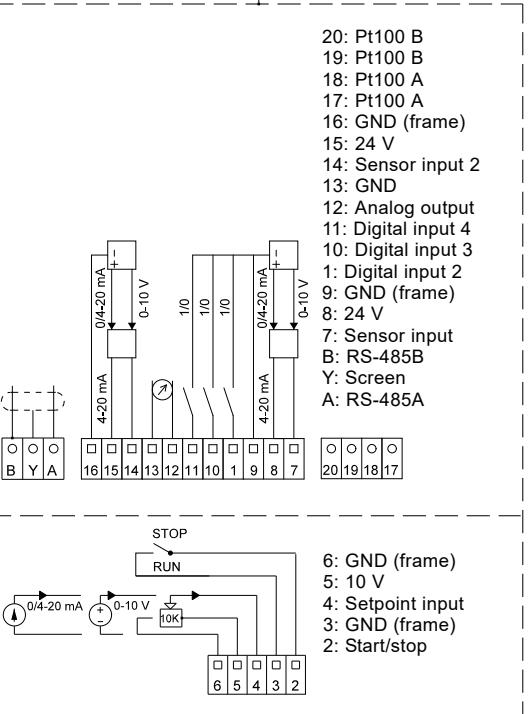

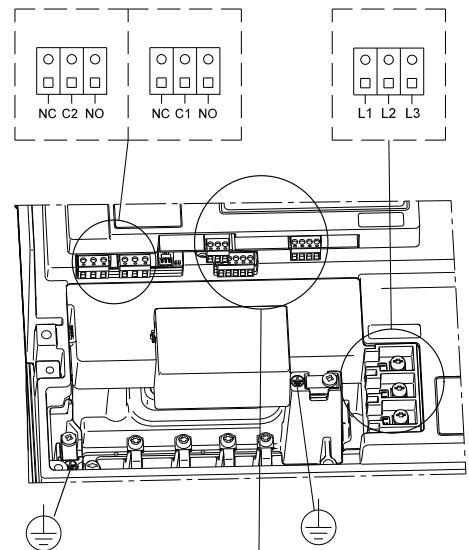

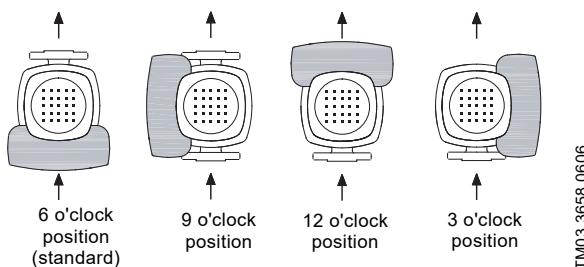

Fig. 5 Connection terminals, Advanced I/O module

Terminal box positions

As standard, the terminal box is fitted on the inlet side of the pump.

TM03 3658 0606

Fig. 6 Terminal box positions

Ambient temperature

Motor power [kW]	Motor make	Phase	Motor efficiency class	Maximum ambient temperature [°C]	Maximum altitude above sea level [m]
0.37 - 1.5	MGE	1	IE5	50	
0.37 - 11	MGE	3	IE5	50	1000
15-22	MGE	3	IE3	40	

If the ambient temperature exceeds the above maximum ambient temperatures or the pump is installed at an altitude exceeding 1000 metres, the motor must not be fully loaded due to the risk of overheating. Overheating may result from excessive ambient temperatures or the low density and consequently low cooling effect of the air.

In such cases, it may be necessary to use a motor with a higher rated output.

Viscosity

The pumping of liquids with densities or kinematic viscosities higher than those of water will cause a considerable pressure drop, a drop in the hydraulic performance and a rise in power consumption.

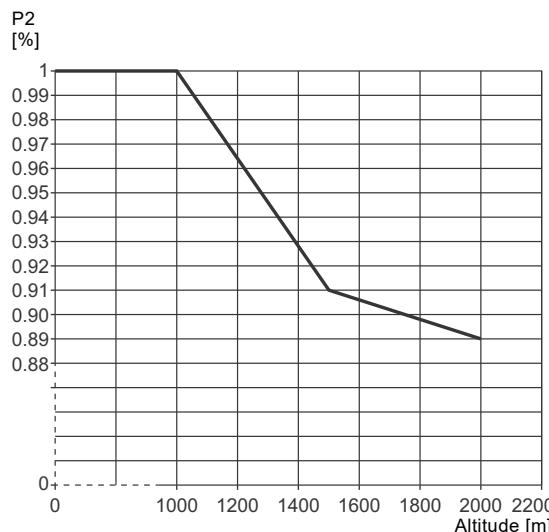

In such situations, the pump must be fitted with a larger motor. If in doubt, contact Grundfos.

Installation altitude

Installation altitude is the height above sea level of the installation site. Motors installed up to 1000 metres above sea level can be loaded 100 %.

Motors installed more than 1000 metres above sea level must not be fully loaded due to the low density and consequently low cooling effect of the air.

2. Control of E-pumps

Examples of E-pump applications

CRE, CRIE and CRNE pumps are the ideal choice for a number of applications characterised by a demand for variable flow at constant pressure. The pumps are suited for water supply systems and pressure boosting as well as for industrial applications.

Depending on the application, the pumps offer energy savings, increased comfort and improved processing.

E-pumps in the service of industry

The industry uses a large number of pumps in many different applications. Demands on pumps in terms of pump performance and mode of operation make speed control a must in many applications.

Some of the applications in which E-pumps are often used are listed below.

Constant pressure

- Water supply
- washing and cleaning systems
- distribution from waterworks
- humidifying systems
- water treatment systems
- process boosting systems.

Example: Within industrial water supply, E-pumps with integrated pressure sensor are used to ensure a constant pressure in the pipe system. From the sensor, the E-pump receives inputs about changes of pressure as a result of changes in the consumption. The E-pump responds to the input by adjusting the speed until the pressure is equalised. The constant pressure is stabilised once more on the basis of a preset setpoint.

Constant temperature

- Air-conditioning systems at industrial plants
- industrial cooling systems
- industrial freezing systems
- casting and moulding tools.

Example: In industrial freezing systems, E-pumps with a temperature sensor increase comfort and lower operating costs compared with pumps without a temperature sensor.

An E-pump continuously adapts its performance to the changing demands reflected in the differences in temperature of the liquid circulating in the freezing system. Thus, the lower the demand for cooling, the smaller the quantity of liquid circulated in the system and vice versa.

Constant level

- Boiler feed systems
- condensate systems
- sprinkler irrigation systems
- chemical industry.

Example: In a steam boiler, it is important to be able to monitor and control pump operation to maintain a constant level of water in the boiler.

By using an E-pump with a level sensor in the boiler, it is possible to maintain a constant water level.

A constant water level ensures optimum and cost-efficient operation as a result of stable steam production.

Dosing applications

- Chemical industry, meaning control of pH values
- petrochemical industry
- paint industry
- degreasing systems
- bleaching systems.

Example: In the petrochemical industry, E-pumps with a pressure sensor are used as dosing pumps.

The E-pumps help to ensure that the correct mixture ratio is achieved when more liquids are combined.

E-pumps functioning as dosing pumps improve processing and offer energy savings.

E-pumps in commercial building services

Commercial building services use E-pumps to maintain a constant pressure or a constant temperature based on a variable flow.

Constant pressure

Water supply in high-rise buildings, such as office buildings and hotels.

E-pumps with a pressure sensor are used for water supply in high-rise buildings to ensure a constant pressure even at the highest draw-off point. As the consumption pattern and thus the pressure changes during the day, the E-pump continuously adapts its performance until the pressure is equalised.

Constant temperature

- Air-conditioning systems in for example hotels and schools
- building cooling systems.

Example: E-pumps are an excellent choice for buildings where a constant temperature is essential. E-pumps keep the temperature constant in air-conditioned, high-rise glass buildings, irrespective of the seasonal fluctuations of the outdoor temperature and various heat impacts inside the building.

Control options

It is possible to communicate with CRE, CRIE, CRNE pumps via the following platforms:

- operating panel on the pump
- Grundfos GO Remote
- control systems, such as PLC, SCADA or BMS.

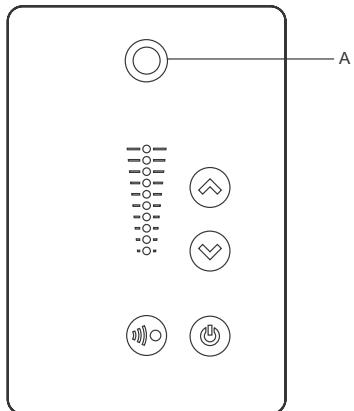

The purpose of controlling an E-pump is to monitor and control the pressure, temperature, flow and liquid level of the system.

Operating panel on pump

The operating panel on the E-pump terminal box makes it possible to change the setpoint settings manually.

MGE 0.37 to 11 kW

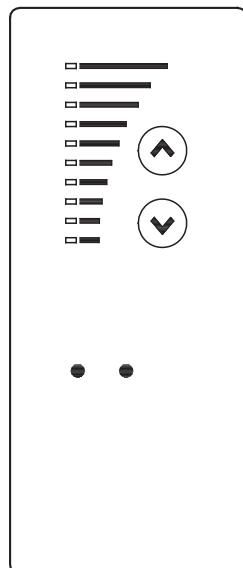

The operating condition of the pump is indicated by Grundfos Eye on the operating panel. See fig. 9, pos. A.

TM05 5693 4312

MGE 15 to 22 kW

TM02 8513 0304

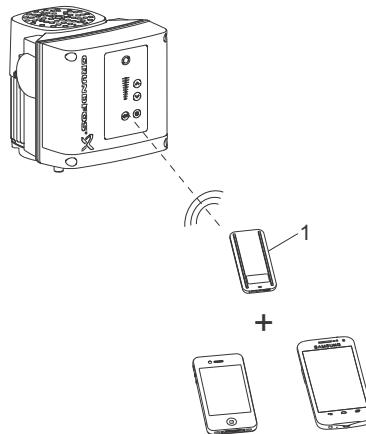

Fig. 10 Operating panel on CRE pump, 15 to 22 kW

Grundfos GO Remote

The pump is designed for wireless radio or infrared communication with Grundfos GO Remote.

Grundfos GO Remote enables setting of functions and gives access to status overviews, technical product information and actual operating parameters.

Grundfos GO Remote offers the following mobile interfaces (MI). See fig. 11.

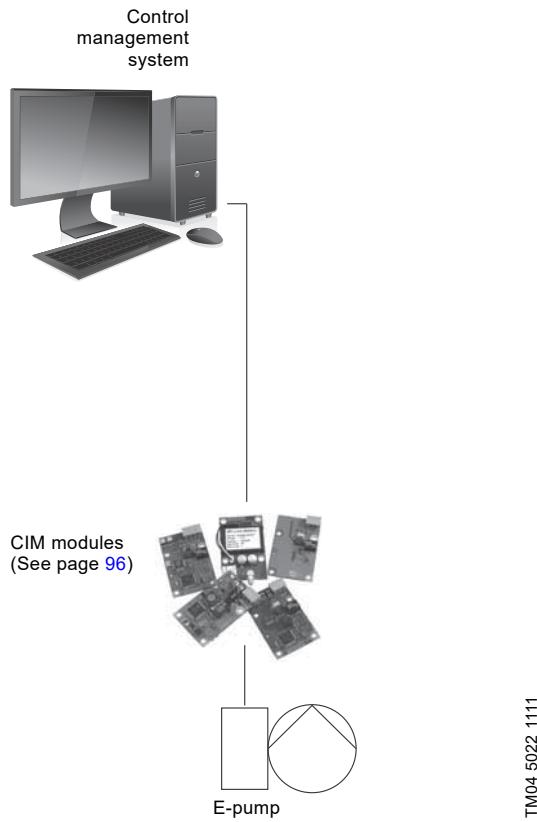

TM06 6256 0916

Fig. 11 Grundfos GO Remote communicating with the pump via radio or infrared connection (IR)

Pos.	Description
1	Grundfos MI 204: Add-on module enabling radio or infrared communication. You can use MI 204 in conjunction with an Apple iPhone or iPod with Lightning connector, for example a fifth generation or later iPhone or iPod. MI 204 is also available together with an Apple iPod touch and a cover.
2	Grundfos MI 301: Separate module enabling radio or infrared communication. You can use the module in conjunction with an Android or iOS-based smart device with Bluetooth connection.

Central management system

TM04 5022 1111

Fig. 12 Structure of a central management system

Control modes for E-pumps

CRE, CRIE and CRNE pumps are available in two variants:

- with integrated pressure sensor
- without sensor.

CRE, CRIE and CRNE with integrated pressure sensor

Use CRE, CRIE and CRNE pumps with integrated pressure sensor in applications where you want to control the pressure of the pump, irrespective of the flow. For further information, see [Examples of E-pump applications](#), page 13.

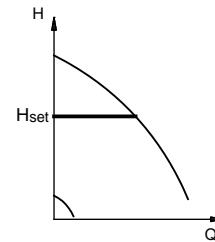

Signals of pressure changes in the pipe system are transmitted continuously from the sensor to the pump. The pump responds to the signals by adjusting its performance to compensate for the pressure difference between the actual and the required pressure. As this adjustment is a continuous process, a constant pressure is maintained in the pipes.

A CRE, CRIE or CRNE pump with integrated pressure sensor facilitates installation and commissioning.

The control mode can be set to either of these:

- constant pressure (factory setting)
- constant curve.

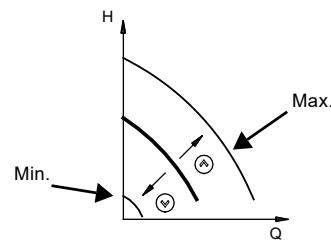

In constant-pressure mode, the pump maintains a preset pressure irrespective of the flow. See fig. 13.

TM00 9322 4796

Fig. 13 Constant-pressure mode

In constant-curve mode, the pump is not controlled. It can be set to pump according to a preset pump characteristic within the range from min. curve to max. curve. See fig. 14.

TM00 9323 1204

Fig. 14 Constant-curve mode

CRE, CRIE and CRNE without a sensor

CRE, CRIE and CRNE pumps without a sensor are suitable in these situations:

- Uncontrolled operation is required.
- You want to fit another sensor in order to control, for example, the flow, temperature, differential temperature, liquid level or pH value at some variable duty point in the system.

MGE 0.37 to 11 kW

These CRE, CRIE and CRNE pumps without a sensor can be set to either of these control modes:

- constant pressure
- constant differential pressure
- constant temperature
- constant differential temperature
- constant flow rate
- constant level
- constant curve
- constant other value.

MGE 15 to 22 kW

These CRE, CRIE and CRNE pumps without a sensor can be set to either of these control modes:

- controlled operation
- uncontrolled operation (factory setting).

In controlled-operation mode, the pump adjusts its performance to the desired setpoint. See fig. 15.

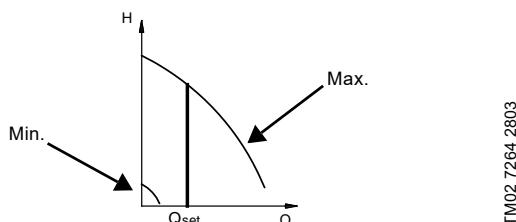

Fig. 15 Constant-flow mode

In uncontrolled-operation mode, the pump operates according to the constant curve set. See fig. 16.

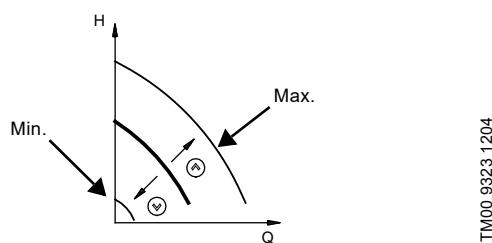

Fig. 16 Constant-curve mode

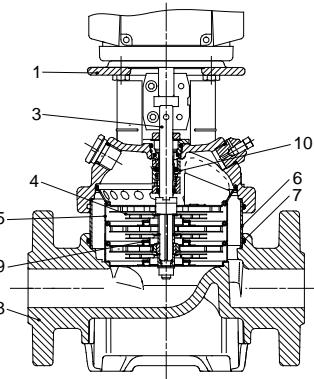

CRE, CRIE and CRNE pumps can be fitted with a sensor types meeting the requirements mentioned in the "Grundfos E-pumps" data booklet available on Grundfos Product Center at www.grundfos.com.

CRE, CRNE 95-1-1 → 95-2-1	-	-	16	
CRE, CRNE 125-1-1 → 125-1	-	-	16	
CRE, CRNE 155-1-1	-	-	16	

NOTE: For pump sizes 32, 45, 64, the max. pressure for PJE version is 50 bar and only available in the CRNE version.

Operating range of the shaft seal

All pumps will be delivered with a HQQE/V cartridge shaft seal as standard.

The operating range of the shaft seal depends on operating pressure, pump type, type of shaft seal and liquid temperature. The range shown in figs 17 and 18 applies to clean water and water with antifreeze liquids. For selection of the right shaft seal, see section 9. *Pumped liquids*, page 82. If the operating range is exceeded, the life of the shaft seal may be reduced.

Note that if you pump demineralised water with a conductivity below 2 $\mu\text{S}/\text{cm}$ with a pump equipped with a silicon carbide/silicon carbide shaft seal, there is an increased risk of electro corrosion. We recommend that you use a silicon carbide/carbon or silicon carbide/tungsten carbide shaft seal instead.

Optional shaft seals

See section 11. *Variants*, page 97 for optional shaft seal solutions.

CRE, CRIE, CRNE 1-155

$\varnothing 12$, $\varnothing 16$ and $\varnothing 22$ shaft seals (0.37 - 55 kW)

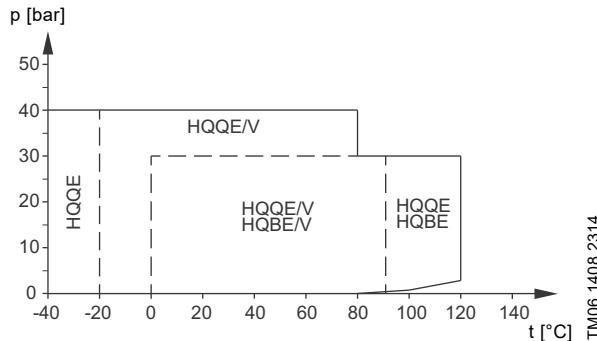

Fig. 17 Operating range of standard shaft seals for CRE, CRIE, CRNE 1-155

Standard shaft seal	Motor size [kW]	Description	Liquid temperature [°C]
HQQE		O-ring (cartridge) (balanced seal), Silicon carbide/Silicon carbide, EPDM	-40 - +120

HQBV		O-ring (cartridge) (balanced seal), Silicon carbide/carbon, FKM	0 - +90

$\varnothing 28$ and $\varnothing 28$ shaft seals (75-110 kW)

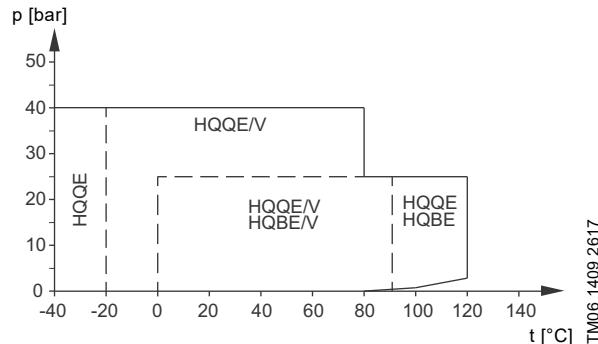

Fig. 18 Operating range of standard shaft seals for CR, CRN 125-155

Standard shaft seal	Motor size [kW]	Description	Liquid temperature [°C]
HQQE		O-ring (cartridge) (balanced seal), Silicon carbide/Silicon carbide, EPDM	-40 - +120
HQQV	75-110	O-ring (cartridge) (balanced seal), Silicon carbide/Silicon carbide, FKM	-20 - +90
HQBE		O-ring (cartridge) (balanced seal), Silicon carbide/carbon, EPDM	0 - +120
HQBV		O-ring (cartridge) (balanced seal), Silicon carbide/carbon, FKM	0 - +90

Maximum inlet pressure

The following table shows the maximum permissible inlet pressure. However, the outlet pressure, which is the actual inlet pressure plus the pressure delivered by the pump, must always be lower than the maximum permissible operating pressure.

If the maximum permissible operating pressure is exceeded, the conical bearing in the motor may be damaged and the life of the shaft seal reduced.

Pump type and stages	Maximum inlet pressure [bar]
CRE, CRIE, CRNE 1	
1-2 → 1-25	10

Examples of operating and inlet pressures

The values for operating and inlet pressures must not be considered individually and must comply with the below statement.

The outlet pressure must be equal to or lower than the maximum operating pressure.

See the following definitions and examples.

Definitions

Pressure type	Definition
Maximum operating pressure	The maximum pressure is stated on the nameplate.
Pump differential pressure	The difference between the outlet pressure and inlet pressure.
Inlet pressure	The pressure measured at the pump inlet.
Outlet pressure	The inlet pressure added to the pump differential pressure.

Example 1

Pump, see page 37: CRE 3-11 A-A-A

Max. operating pressure: 16 bar

Max. inlet pressure: 10 bar

Pump differential pressure: 10.3 bar*

* Flow rate = 0 m³/h

This pump is not allowed to start at an inlet pressure of 10 bar, but at an inlet pressure of 16.0 - 10.3 = 5.7 bar.

Example 2

Pump, see page 45: CRE 10-2 A-A-A

Max. operating pressure: 16 bar

Max. inlet pressure: 8 bar

Pump differential pressure: 2.9 bar*

* Flow rate = 0 m³/h

This pump is allowed to start at an inlet pressure of 8 bar, as the outlet pressure is lower than the maximum operating pressure. This results in an operating pressure of 8.0 + 2.9 = 10.9 bar.

If the inlet or operating pressure exceeds the pressure permitted, see section 11. *Variants*, page 97.

6. Selection and sizing

Selection of pumps

Base the selection of pumps on these parameters:

- Duty point of the pump. See page 28.
- Sizing data such as pressure loss as a result of height differences, friction loss in the pipes, pump efficiency. See page 28.
- Pump materials. See page 30.
- Pump connections. See page 30.
- Shaft seal. See page 30.

Duty point of the pump

From a duty point, you can select a pump on the basis of the curve charts in section [7. Performance curves and technical data](#), starting on page 33.

Ideally, the duty point should match the best efficiency on the pump curve. See the example in fig. 20.

Sizing data

When sizing a pump, take these parameters into account:

- Required flow rate and pressure at the draw-off point
- Pressure loss as a result of height differences (H_{geo})
- Friction loss in the pipes (H_f)
It may be necessary to account for pressure loss in connection with long pipes, bends, valves or similar.
- Best efficiency at the estimated duty point.
- NPSH value.

For calculation of the NPSH value, see [Minimum inlet pressure, NPSH](#), page 31.

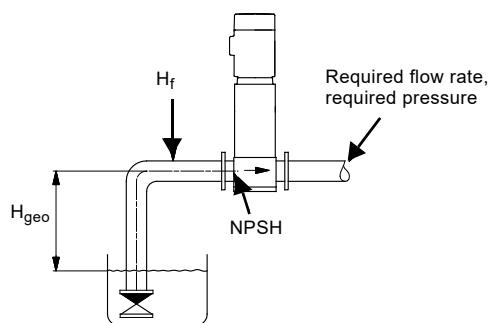

Fig. 19 Sizing data

TM02 6711 1403

Pump efficiency

Before determining the best efficiency point, identify the operation pattern of the pump. If you expect the pump to always operate at the same duty point, then select a CR pump which operates at a duty point corresponding to the best efficiency of the pump.

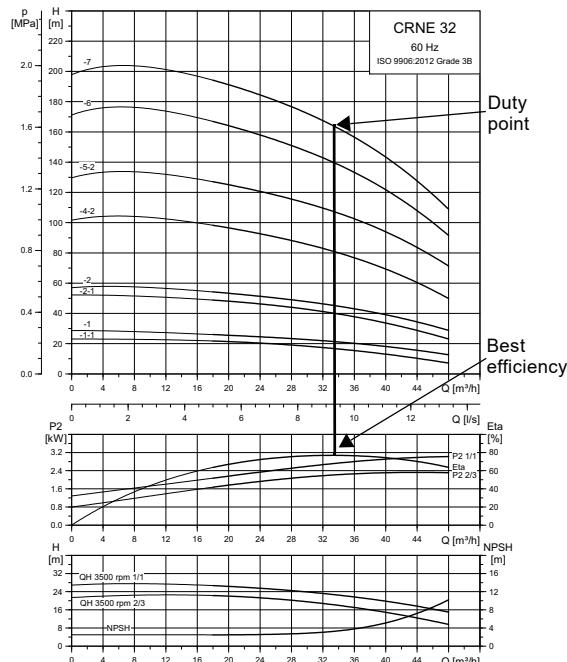

Fig. 20 Example of a CRE pump's duty point

As the pump is sized on the basis of the highest possible flow rate, it is important to always have the duty point to the right of the best efficiency point on the efficiency curve (eta). This must be considered in order to keep the efficiency high when the flow rate drops.

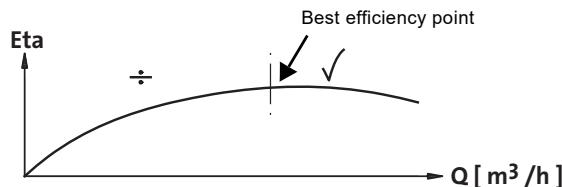

Fig. 21 Best efficiency

TM05 6846 2719

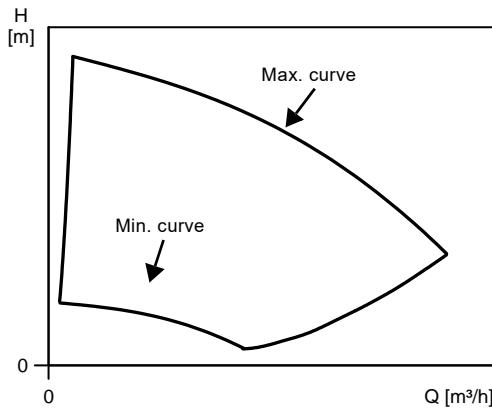

TM00 9190 1303

Normally, E-pumps are used in applications characterised by a variable flow. Consequently, it is not possible to select a pump that is constantly operating at optimum efficiency.

In order to achieve optimum operating economy, select the pump based on the following criteria:

- The maximum required duty point must be as close as possible to the QH curve of the pump.

The flow rate at the required duty point must be close to the optimum efficiency (eta) for most operating hours. Between the minimum and maximum performance curves, E-pumps have an infinite number of performance curves, each representing a specific speed. Therefore, it may not be possible to select a duty point close to the 100 % curve.

TM01 4916 4803

Fig. 22 Minimum and maximum performance curves

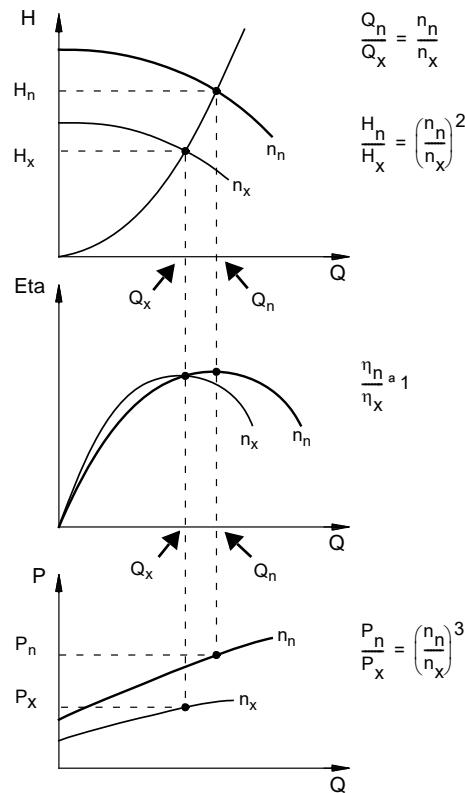

In situations where it is not possible to select a duty point close to the 100 % curve, the affinity equations can be used. The head (H), flow (Q) and input power (P) are all the appropriate variables for determining the motor speed (n). See fig. 23.

Note:

The approximated formulas apply on the condition that the system characteristic remains unchanged for n_n and n_x and that it is based on the formula $H = k \times Q^2$ where k is a constant.

The power equation implies that the pump efficiency is unchanged at the two speeds. In practice, this is not quite correct.

To obtain a precise calculation of the power savings resulting from a reduction of pump speed, take into account the efficiencies of the frequency converter and the motor.

**Fig. 23** Affinity equations

Legend

H_n	Rated head [m]
H_x	Actual head [m]
Q_n	Rated flow rate [m^3/h]
Q_x	Actual flow rate [m^3/h]
n_n	Rated motor speed [min^{-1}] ($n_n = 3500 \text{ min}^{-1}$)
n_x	Actual motor speed [min^{-1}]
η_n	Rated efficiency [%]
η_x	Actual efficiency [%]

Grundfos Product Center

We recommend that you size your pump in Grundfos Product Center, which is a selection program offered by Grundfos. For further information, see section [12. Grundfos Product Center](#).

Grundfos Product Center features a user-friendly and easy-to-use virtual guide which leads you through the selection of the pump for the application in question.

Pump material

Select the material variant on the basis of the liquid to be pumped.

The product range covers the following basic types:

- CRE, CRIE
Use CRE, CRIE pumps for clean, non-aggressive liquids such as potable water and oils.
- CRNE
Use CRNE pumps for industrial liquids and acids.
See section *9. Pumped liquids*, page 82, or contact Grundfos.

For saline- or chloride-containing liquids, such as sea water, CRTE pumps of titanium are available.

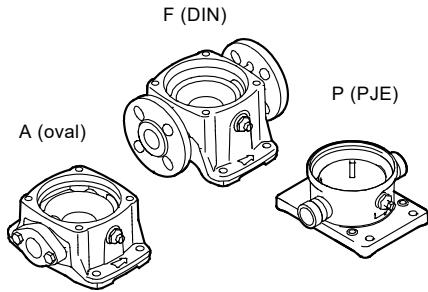

TM01 2100 1198

Fig. 24 CR pump

Pump connections

Selection of a pump connection depends on the rated pressure and pipes. To meet any requirement, the CRE, CRIE and CRNE pumps offer a wide range of flexible connections, such as:

- oval flange (BSP)
- DIN flange
- PJE coupling
- clamp coupling
- union (+GF+)
- other connections on request.

TM02 11201 0601

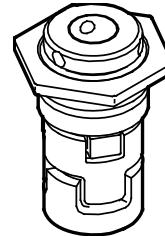

Fig. 25 Pump connections

Shaft seal

As standard, the CRE range is fitted with a Grundfos shaft seal (cartridge type) which is suitable for the most common applications.

The following key parameters must be taken into account when selecting the shaft seal:

- type of pumped liquid
- liquid temperature
- maximum pressure.

TM02 0538 4800

Fig. 26 Shaft seal (cartridge type)

Grundfos offers a wide range of shaft seal variants to meet specific demands. See section *9. Pumped liquids*, page 82.

Operating pressure and inlet pressure

Do not exceed the limit values for these pressures:

- maximum operating pressure
- maximum inlet pressure.

Servicing shaft seals

Replacement shaft seals are available as complete service kits*.

Shaft seals fitted on CR, CRN 125-155 pumps with Ø28 mm or Ø36 mm shaft ends are serviceable. This means that the wear parts in these shaft seals are available as service kits* and can be replaced without having to renew the complete shaft seal.

* All service kits include detailed instructions on how to carry out the replacement.

Minimum inlet pressure, NPSH

We recommend calculating the inlet pressure "H" in these situations:

- The liquid temperature is high.
- The flow is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- Inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the inlet side of the pump.

The maximum suction lift "H" in metres head can be calculated as follows:

$$H = p_b \times 10.2 - \text{NPSH} - H_f - H_v$$

p_b = Barometric pressure in bar.

p_b can be set to 1 bar at sea level.

In closed systems, p_b indicates the system pressure in bar.

NPSH = Net Positive Suction Head in metres head.
To be read from the NPSH curve at the highest flow the pump will be delivering.

H_f = Friction loss in inlet pipe in metres head at the highest flow the pump will be delivering.

H_v = Vapour pressure in metres head
To be read from the vapour pressure scale.
 H_v depends on the liquid temperature t_m .

If the calculated "H" is positive, the pump can operate at a suction lift of maximum "H" metres head.

If the calculated "H" is negative, an inlet pressure of minimum "H" metres head is required.

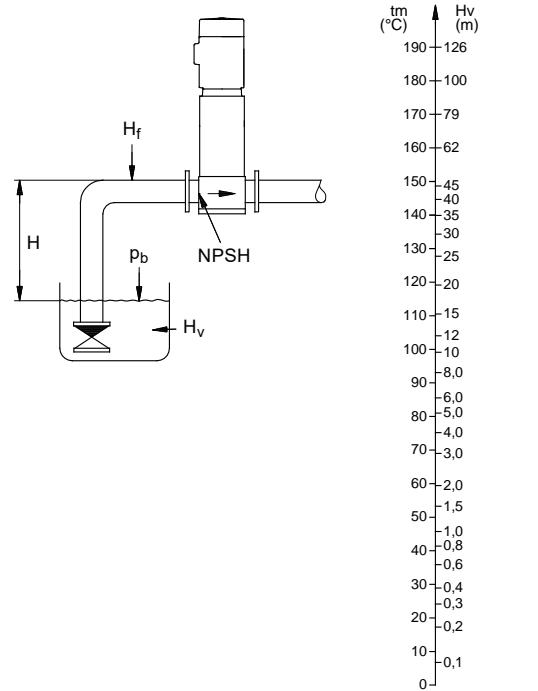

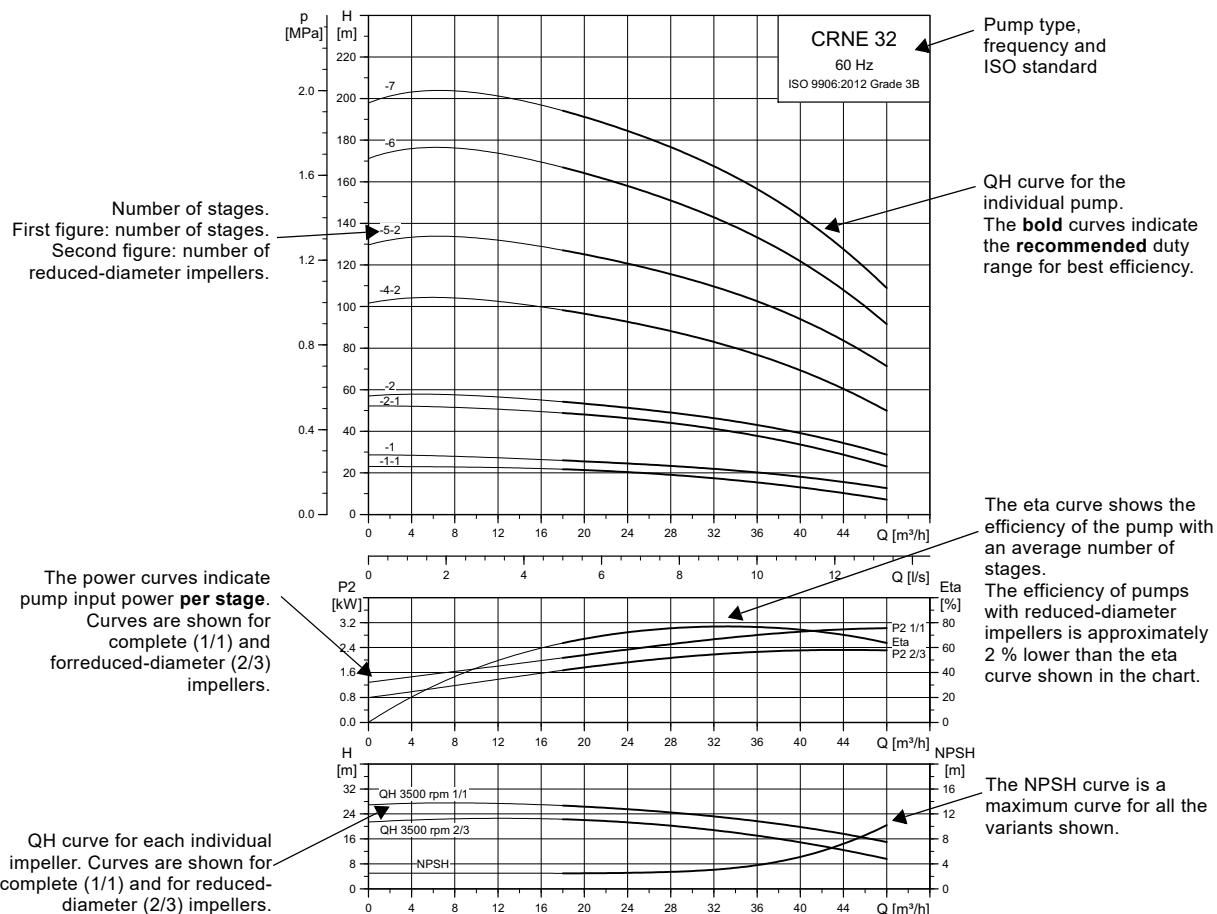

Fig. 27 Minimum inlet pressure, NPSH

To avoid cavitation, never select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow.

TM02 7439 3403

How to read the curve charts

TM05 6846 0918

TM01 2816 0303

Fig. 28 How to read the curve charts

Guidelines to performance curves

The guidelines below apply to the curves shown on the following pages:

- Tolerances to ISO 9906:2012 Grade 3B, if indicated on the curve chart.
- The motors used for the measurements are standard Grundfos MG or MGE motors.
- Measurements have been made with airless water at a temperature of 20 °C.
- The curves apply to the following kinematic viscosity: $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt).
- Due to the risk of overheating, the pumps must not be used at a flow rate below the minimum flow rate.

The curve below shows the minimum flow rate as a percentage of the rated flow rate in relation to the liquid temperature. The dotted line shows a CR pump fitted with an air-cooled top assembly.

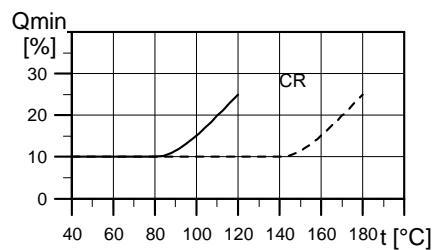

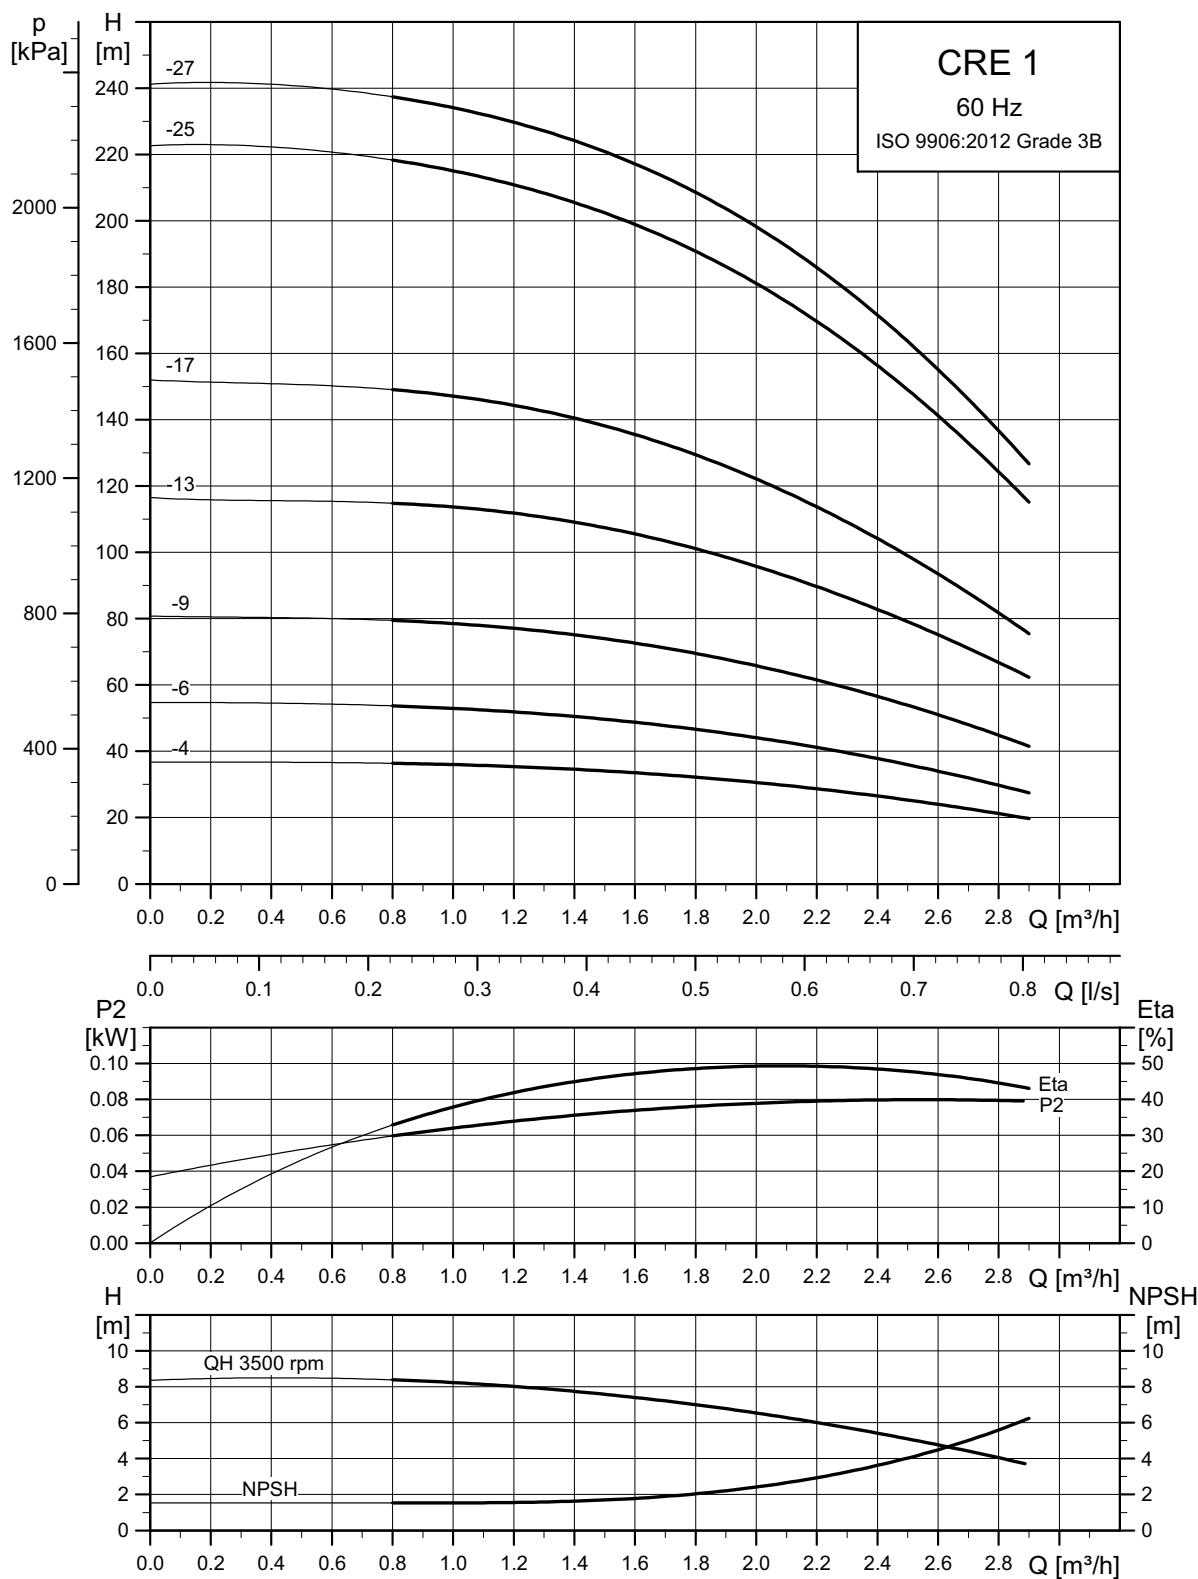

Fig. 29 Minimum flow rate

	4.0	112	3	200-240	10.5 - 8.8	0.94 - 0.94	90.3	IE5
	5.5	132	3	200-240	14.1 - 11.8	0.94 - 0.94	90.8	IE5

9. Pumped liquids

The pumps are suitable for thin, non-explosive liquids, not containing solid particles or fibres. The liquid must not chemically attack the pump materials.

When pumping liquids with a density and/or viscosity higher than that of water, use oversized motors, if required.

Whether a pump is suitable for a particular liquid depends on a number of factors of which the most important are the chloride content, pH value, temperature and content of chemicals and oils.

Please note that aggressive liquids, such as seawater and some acids, may attack or dissolve the protective oxide film of the stainless steel and thus cause corrosion.

CRE and CRIE

CRE and CRIE pumps are suitable for non-corrosive liquids.

Use CRE or CRIE pumps for liquid transfer, circulation and pressure boosting of cold or hot clean water.

CRNE

CRNE pumps are suitable for industrial liquids.

Use CRNE pumps in systems where all parts in contact with the liquid must be made of high-grade stainless steel.

CRTE

For saline or chloride-containing liquids such as seawater or for oxidising agents such as hypochlorites, we offer CRTE pumps made of titanium.

See the separate data booklet on CRTE available at www.grundfos.com (Grundfos Product Center).

List of pumped liquids

A number of typical liquids are listed on the next page.

Other pump versions may be applicable, but those stated in the list are considered to be the best choices.

The table is intended as a general guide only and cannot replace actual testing of the pumped liquids and pump materials under specific operating conditions.

Use the list with some caution, however. Factors such as those mentioned below may affect the chemical resistance of a specific pump version:

- concentration of the pumped liquid
- liquid temperature
- pressure.

Take safety precautions when pumping dangerous liquids.

Notes

D Often with additives.

The density and/or viscosity differ from that/those of water.

E Take this factor into account when calculating motor output and pump performance.

F Pump selection depends on many factors. Contact Grundfos.

H Risk of crystallisation/precipitation in shaft seal.

1 Highly flammable liquid.

2 Combustible liquid.

3 Insoluble in water.

4 Low self-ignition point.

Pumped liquid	Chemical formula	Note	Liquid concentration, liquid temperature	CRE, CRIE	CRNE
Acetic acid	CH ₃ COOH	-	5 %, 20 °C	-	HQQE
Acetone	CH ₃ COCH ₃	1, F	100 %, 20 °C	-	HQQE

Sulphuric acid	H ₂ SO ₄	F	1 %, 20 °C	-	HQQV
Sulphurous acid	H ₂ SO ₃	-	1 %, 20 °C	-	HQQE
Unsalted swimming-pool water		-	Approx. 2 ppm free chlorine (Cl ₂)	HQQE	-

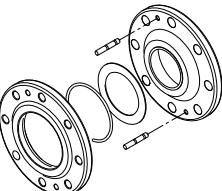

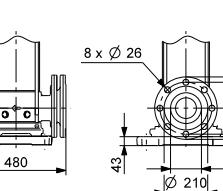

10. Accessories

Pipe connection

Various sets of counterflanges and couplings are available for pipe connection.

Adapter kit

DN 150 flanges are available for CRE, CRNE 125 and 155 pumps. To use DN 150 flanges, you must order two adapter kits per pump.

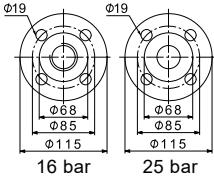

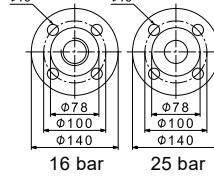

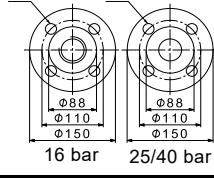

Adapter kit	Pump type	Pipe connection	Adapter kits required	Product number
 TM04 00214807	CRE 125 CRE 155	150 mm, nominal	2	96638169
 TM04 00204807	CRNE 125 CRNE 155	150 mm, nominal	2	96638180

We offer an optional 6" pump base for the CRN 95, 125 and 155 pump ranges with DN 150 connections according to DIN, ANSI and JIS standards. This base eliminates the need for an adapter kit.

For more information, see CR "Custom-built pumps" data booklet in Grundfos Product Center at www.grundfos.com.

Counterflanges for CRE

A set consists of one counterflange, one gasket, bolts and nuts.

Counterflange	Pump type	Description	Rated pressure	Pipe connection	Product number
 TM05 0998 2011	CRE 1s CRE 1 CRE 3 CRE 5	Threaded	16 bar, EN 1092-2	Rp 1	409901

* Flange with 20 mm higher collar. With this collar, the installation dimensions of a CR 20 will be identical to those of a CR 32. If a CR 32 is replaced by a CR 20, the base must be raised by 15 mm.

Counterflanges for CRN

Counterflanges for CRN pumps are made of stainless steel EN 1.4401 (\approx AISI 316).

A set consists of one counterflange, one gasket, bolts and nuts.

Counterflange	Pump type	Description	Rated pressure	Pipe connection	Product number
 16 bar 25 bar	TM05 0998 2011 CRNE 1s, 1, 3, 5	Threaded	16 bar, EN 1092-1	Rp 1	405284

If a CR 32 is replaced by a CR 20, the base must be raised by 15 mm.

PJE couplings for CRNE

Materials in contact with the pumped liquid are made of stainless steel EN 1.4401 (\approx AISI 316) and rubber.

A set consists of two coupling halves (Victaulic type 77), one gasket, one pipe stub (for welding or threaded), bolts and nuts.

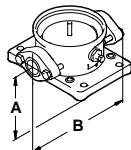

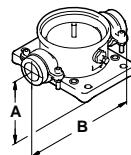

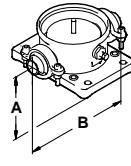

Coupling	Pump type	Pipe stub	Maximum pressure [bar]	A	B	Pipe connection	Rubber parts	Number of coupling sets required	Product number

EMC filter (11 kW)	
EMC filter (15 kW)	
EMC filter (18.5 kW)	96478309
EMC filter (22 kW)	

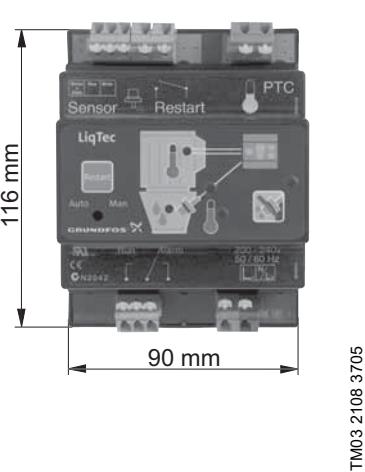

LiqTec

The LiqTec dry-running protection unit protects the pump and process against dry running and temperatures exceeding 130 ± 5 °C.

When connected to the motor PTC sensor, LiqTec also monitors the motor temperature.

LiqTec is prepared for DIN rail mounting in control cabinets.

Enclosure class: IPX0.

Adjustable anti-vibration feet

TM04 32245 4016

The adjustable support foot reduces any vibrations from the system to the floor, allowing the system to be height-adjusted by ± 20 mm.

Description	Pump type	Product number
1 pcs. anti-vibration foot	CR(I)E 3 and 5	96412344
	CR(I)E 10 to 20	96412345
	CRE 32 to 95	96412347

Control MPC

TM05 3232 1012

Grundfos Control MPC is a complete control cabinet with a built-in CU 352 multipump control unit, main switch, contactors, IO 351 modules and cabling. Control MPC is designed for the control and monitoring of up to six identical pumps connected in parallel. Control MPC is supplied with all necessary components and contains application-optimised software.

For further information, please see the Control MPC Data Booklet at product-selection.grundfos.com.

Grundfos GO Remote

Grundfos GO Remote is used for wireless infrared or radio communication with the pumps.

Various Grundfos GO Remote variants are available. The variants are described in the following.

MI 202 and MI 204

MI 202 and MI 204 are add-on modules with built-in infrared and radio communication. MI 202 can be used in conjunction with an Apple iPhone or iPod with 30-pin connector and iOS 5.0 or later, for example a fourth generation iPhone or iPod.

MI 204 can be used in conjunction with an Apple iPhone or iPod with Lightning connector, for example a fifth generation iPhone or iPod.

(MI 204 is also available together with an Apple iPod touch and a cover.)

 TM05 3887 1612
 TM05 7704 1513

Fig. 30 MI 202 and MI 204

Supplied with the product:

- Grundfos MI 202 or 204
- sleeve
- quick guide
- charger cable.

MI 301

MI 301 is a module with built-in infrared and radio communication. MI 301 can be used in conjunction with Android or iOS-based smart devices with a Bluetooth connection. MI 301 has a rechargeable Li-ion battery and must be charged separately.

Fig. 31 MI 301

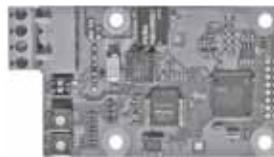

Supplied with the product:

- Grundfos MI 301
- sleeve
- battery charger
- quick guide.

CIM communication interface modules

GIA 6121

Fig. 32 Grundfos CIM communication interface module

The CIM modules enable communication of operating data, such as measured values and setpoints, between CRE, CRIE or CRNE pumps of 11-22 kW and a building management system. The CIM modules are add-on communication modules which are fitted in the terminal box of CRE, CRIE, CRNE pumps of 11-22 kW.

Note: CIM modules must be fitted by authorised personnel.

We offer the following CIM modules:

CIM 100

For communication via LONWorks.

CIM 150

For communication via PROFIBUS DP.

CIM 200

For communication via Modbus RTU.

CIM 260

CIM 260 for 3G/4G cellular data connection to SCADA systems or for monitoring and control via SMS.

CIM 280

For connection to Grundfos iSOLUTIONS Cloud/GRM.

CIM 300

For communication via BACnet MS/TP.

CIM 500

Ethernet module for communication via PROFINET, Modbus TCP, BACnet IP, EtherNet/IP GRM IP, Grundfos iSOLUTIONS Cloud.

Available CIM modules

Description	Fieldbus protocol	Product number
CIM 100	LONWorks	96824797

* Antenna not included.

For further information about data communication via CIM modules and fieldbus protocols, see the CIM documentation available in Grundfos Product Center at www.grundfos.com.

11. Variants

The variants are available on request.

Although the Grundfos CRE, CRIE, CRNE product range offers a number of pumps for different applications, customers require specific pump solutions to satisfy their needs. See the following documents:

- Grundfos "CR Custom-built pumps" data booklet
- Grundfos "CRN high pressure" data booklet.

Below please find the range of options available for customising the CRE pumps to meet the customers' demands.

Contact Grundfos for further information or for requests other than the ones mentioned below.

Motors

Variant	Description
Oversize motor	Ambient temperatures above 50 °C or installation at altitudes of more than 1000 metres above sea level require the use of an oversize motor, i.e. derating.
4-pole motor	We offer 4-pole standard motors.
IP66	The motor is completely dust-proof. The motor is protected against heavy seas or high-pressure water jets from any direction.
IT network (Earthing system)	This motor variant is designed for supply by an electric distribution system which has no connection to earth. This type of earthing system is called an IT network.
Advanced display	The pumps can be fitted with an advanced operating panel as an option.
Simple display	The pumps can be fitted with a simple operating panel as an option. Grundfos GO Remote is required to configure and set the pump.
Standard function module (FM200)	We offer FM 200 as an alternative to FM 300, fitted as standard. FM 200 offers fewer in- and output options compared to FM 300. The module has these connections: <ul style="list-style-type: none"> • two analog inputs • two digital inputs or one digital input and one open-collector output • Grundfos Digital Sensor input and output • two signal relay outputs • GENibus connection.

Shaft seals

Variant	Description
Shaft seal with FFKM O-ring	We recommend shaft seals with FFKM or FXM O-ring for applications where the pumped liquid may damage the standard O-ring material.
Seal with flush, quench seal	We recommend seals with flush/quench seals for applications involving crystallising, hardening or sticky liquids.
Air-cooled shaft seal system	We recommend air-cooled shaft seal systems for applications involving extremely high temperatures. No conventional mechanical shaft seal can withstand liquid temperatures of up to 180 °C for any length of time. In order to ensure a low liquid temperature around the standard shaft seal, the pump is fitted with a special air-cooled shaft seal chamber. No separate cooling is required.
Double seal with pressure chamber	We recommend double seals with pressure chamber for applications involving poisonous or explosive liquids. It protects the surrounding environment and the people working in the vicinity of the pump. It consists of two seals mounted in a "back-to-back" arrangement inside a separate pressure seal chamber. As the pressure in the chamber is higher than the pump pressure, leakage is prevented. A dosing pump or a special pressure intensifier generates the seal chamber pressure.
CR MAGdrive	Magnetically driven pumps for industrial applications. Key applications are industrial processes involving the handling of aggressive, environmentally dangerous or volatile liquids, for example organic compounds and solvents.

Pumps

Variant	Description
Horizontally mounted pump	For safety or height reasons, certain applications, for instance on ships, require the pump to be mounted in a horizontal position. For easy installation, the pump is fitted with brackets that support motor and pump.
Low-temperature pump	Exposed to temperatures down to -40 °C, coolant pumps may require neck rings with a different diameter in order to prevent impeller drag.
High-speed pump up to 47 bar	For high-pressure applications, we offer a unique pump capable of generating a pressure of up to 47 bar. The pump is fitted with a high-speed motor, type MGE. The direction of rotation is the opposite of that of standard pumps, and the chamber stack is turned upside-down, as a result of which the pumped liquid flows in the opposite direction.
High-pressure pump up to 47 bar	For high-pressure applications, we offer a unique double pump system capable of generating a pressure of up to 47 bar.
Low-NPSH pump (improved suction)	We recommend the Low-NPSH pump for boiler-feed applications where cavitation may occur due to poor inlet conditions.
Pump with bearing flange	The bearing flange is suitable for applications where the inlet pressure is higher than the maximum pressure recommended. The bearing flange increases the life of motor bearings. We recommend this pump for standard motors.
Belt-driven pump	Belt-driven pumps designed to operate in places with limited space or where no electrical power is available.
Pump for pharmaceutical and biotechnological applications	CRNE pumps designed for applications requiring the sterilisation and CIP capability of pipes, valves and pumps. (CIP = clean-in-place).

Connections and other variants

Variant	Description
Pipe connections	In addition to the wide range of standard flange connections, a 16 bar DIN standard clamping flange is available. Customised flanges are available according to specifications.
TriClamp connection	TriClamp connections are of a hygienic design with a sanitary coupling for use in the pharmaceutical and food industry.
Electropolished pump	To substantially reduce the risk of corrosion of the materials. For use in the pharmaceutical and food industry.

12. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

<http://product-selection.grundfos.com>

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc. in PDF format.

TM07 2384

The screenshot shows the Grundfos Product Center homepage. At the top, there's a navigation bar with the Grundfos logo, 'PRODUCT CENTER', and links for 'HOME', 'FIND PRODUCT', 'COMPARE', 'YOUR PROJECTS', 'SAVED ITEMS', 'TOOLS', and 'HELP'. On the right, it shows 'Product range: United Kingdom | 50 Hz | Language: English' and a 'Change settings' link. Below the navigation is a search bar with a dropdown menu set to 'Products' (circled 1), a text input field for 'input product number or a whole or partial product name', a magnifying glass icon, and a 'SEARCH' button. Below the search bar are five cards with icons and text: 'Sizing' (circled 2), 'Catalogue' (circled 3), 'Replacement' (circled 4), and 'Liquids' (circled 5). At the bottom, there are tabs for 'Quick sizing' (selected), 'Advanced sizing by application', and 'Guided selection'. Under 'Quick sizing', there are fields for 'Flow (Q)'' and 'Head (H)' with dropdown menus for units ('m³/h' and 'm'). To the right, there's a section titled 'Select what to size by:' with three radio button options: 'Size by application', 'Size by pump design', and 'Size by pump family'. A large 'START SIZING' button is at the bottom right.

TM07 2383

Pos. Description

- 1 This drop-down menu enables you to set the search function to "Products" or "Literature".
- 2 **SIZING** enables you to size a pump based on entered data and selection choices.
- 3 **CATALOGUE** gives you access to the Grundfos product catalogue.
- 4 **REPLACEMENT** enables you to find a replacement product.
Search results will include information on
 - the lowest purchase price
 - the lowest energy consumption
 - the lowest total life cycle cost.
- 5 **LIQUIDS** enables you to find pumps designed for aggressive, flammable or other special liquids.
